

# STUDY ELLS WHERE

## Landscape Architecture and Spatial Planning (LASP)

The LASP network provides opportunities for students to learn about the diversity of the subject area of Landscape Architecture and Spatial Planning of the Euroleague of Life Sciences. Its mission is to develop the international dimension of landscape design and planning education and research, and bring it into practice. If you intend to do part of your study abroad or widen your scope with international insights and experience, you may consider to participate in one of the network's activities.

**Euro**league

F O R L I F E S C I E N C E S

[www.euroleague-study.org](http://www.euroleague-study.org)

The network helps you to find **opportunities for doing part of your studies abroad** that respond to your special interests. Your home university acknowledges credits and grades you have earned. Taking courses ELLS-WHERE will also help develop a better understanding of what it means to work in a different context, which will enrich your training as a designer or planner.

The network also organises **summer schools** and **workshops** where students work on real world planning and design assignments. International student groups from different universities and different backgrounds

form teams and you are challenged to share your knowledge and experience with other students while working together on making proposals for landscape interventions.

The network also organises **seminars** for advanced MSc and PhD students. These seminars are about specific subjects that complement the regular study programmes or aim to exchange ideas on research activities and research results. Participating in one of these seminars is an inspiring opportunity for extended learning or discussing your research with an international audience.
