Geomorphological Perspectives on Human-Environment Interactions Across Multiple Timescales

Czech University of Life Sciences
Faculty of Environmental Sciences
Kamýcká 129
Prague 6 - Suchbát, 165 21

J. Michael Daniels is a geographer with research interests in geomorphology, late Quaternary environmental change, floodplain stratigraphy, paleohydrology, and soil-landscape analysis. His research examines how geomorphic systems respond to natural and anthropogenic environmental change over timescales ranging from decades to millennia. He is a visiting scholar at CULS with support from U.S. National Science Foundation and U.S.-Czech Republic Fulbright Commission.
